                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               260
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              163
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    223
```

The present invention describes isolated, enriched or purified nuclearids encoding PTP04, SAD, PTP05, PTP10, ALP and ALK-7 proteins. The above proteins, other than ALK-7, are protein tyrosine phosphatases (PTPs) and are used to identify substances that modulate their actions. (i.e. agonists and antagonists, including NBP) in vivo or in vitro.

Nucleic acid fragments of the polynucleotides encoding the proteins can be used as probes to identify and clone related sequences; to detect protein-encoded RNA; to generate transgenic animals and in gene therapy (optionally after mutation). Ab are used to determine the proteins. The present sequence represents a human PTP05 peptide from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                  28-APR-1997;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 29
The present invention describes isolated, enriched or purified nucleic acids encoding PTP04, SAD, PTP05, PTP10, ALP and ALK-7 proteins. The above proteins, other than ALK-7, are protein tyrosine phosphatases (PTPs) and are used to identify substances that modulate their activity (i.e. agonists and antagonists, including NBP) in vivo or in vitro. These substances are used to treat or prevent diseases associated with abnormal signal transduction pathways that involve the proteins, particularly
                                                                                                                                                                         Example 14;
                                                                                                                                                                                                                                                                                                                                                                                                           (SUGE-)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   proteins. ```

The present invention describes isolated, enriched or purified nucleic acids encoding PTP04, SAD, PTP05, PTP10, ALP and ALK-7 proteins. The above proteins, other than ALK-7, are protein tyrosine phosphatases (PTPs) and are used to identify substances that modulate their activity (i.e. agonists and antagonists, including NBP) in vivo or in vitro. These substances are used to treat or prevent diseases associated with abnormal signal transduction pathways that involve the proteins, particularly cancer (e.g. leukaemia and lymphoma), while modulators of ALK-7 (which is a type I receptor serine/threonine kinase) are used to promote neuronal

New nucleic acid encoding specific protein for identifying specific modulators for tre cancer and neurodegenerative disease.

ein tyrosine phosphatases treatment and prevention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          cancer (e.g. leukaemia and lymphoma), while modulators of ALK-7 (which is a type I receptor serine/threonine kinase) are used to promote neuronal survival, particularly for treating Alzheimer's, Parkinson's or Huntington's diseases. Nucleic acid fragments of the polynucleotides encoding the proteins can be used as probes to identify and cione related sequences; to detect protein-encoded RNA; to generate transgenic animals and in gene therapy (optionally after mutation). Ab are used to determine the proteins. The present sequence represents a human PTPO5 peptide from the proteins invention.

                     The present invention describes isolated, enriched or purified nucleic acids encoding PT004, SAD, PT005, PT010, ALP and ALK-7 proteins. The present sequence represents rat PT010. The above proteins, other than A-7, are protein tyrosthe phosphatases (PTPs) and are used to identify substances that modulate their activity (i.e. agonists and antagonists, including NBP) in vivo or in vitro. These substances are used to treat prevent diseases associated with abnormal signal transduction pathways that involve the proteins, particularly cancer (e.g. leukaemia and lymphoma), while modulators of ALK-7 (which is a type I receptor
                                                                                                                                                                                                                                                                                                                              New nucleic acid encoding specific protein tyrosine phosphatases for identifying specific modulators for treatment and prevention cancer and neurodegenerative disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Plowman
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     PTP04; PTP05; PTP10; SAD; ALP; ALK-7; protein tyrosine phosphatase; type I receptor serine/threonine kinase; cancer; leukaemia; lymphom neurodegenerative disease; neuronal survival; Alzheimer's disease; Parkinson's disease; Huntington's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            survival, particularly for treating Alzheimer's, Parkinson's or Huntington's diseases. Nucleic acid fragments of the polynucleotides encoding the proteins can be used as probes to identify and clone related sequences; to detect protein-encoded RNA; to generate transgenic animals and in gene therapy (optionally after mutation). Ab are used to determine the proteins. The present sequence represents a human PTP05 peptide from the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    18-JUN-1997;

                                            dysfunction related disease, preferably the above mentioned diseases. The invention is useful for treating the above mentioned disorders, where the CNS disorder is selected from Parkinson's disease, multiple sclerosis, stroke, Alzheimer's disease, and Huntington's disease, and the cardiovascular disorder is selected from congestive heart failure and myocardial infarction. The molecules of the invention are useful in diagnostic assays for detecting diseases and abnormalities or susceptibility to disease and abnormalities related to the presence of mutations in the polymucleotide coding the polymeptide of the invention. The present amino acid sequence represents the human tyrosine phosphatase protein #1 of the invention. This sequence is encoded by the human tyrosine phosphatase gene located on chromosome 10
                                                                                                                                                                                                                                                                                                                                                                                                                                                   chronic obstructive
                                                                                                                                                                                                                                                                                                                                                                                                                 onic obstructive pulmonary disease, cardiovascular disorder or invention is useful for treating a human tyrosine phosphatase
                                                                                                                                                                                                                                                                                                                                                                                                                                                   cardiovascular
                                                                                                                                                                                                                                                                                                                                                                                                                                                   disorder or
                                                                                                                                                                                                                                                                                                                                                                                                                                                       cancer.

CC associated phosphatase, where the targets are associated with signal C transduction in cancer cells; (5) a compound (C) for the treatment of a tumour; (6) a composition for the treatment of a tumour; (6) a composition for the treatment of a tumour; (6) a composition for the treatment of a tumour; (6) a composition for the treatment of a tumour; and CC pharmaceutical carrier and (C); (7) methods for treating a tumour; and composition and the present invention has cytostatic, immunosuppressive, antidiabetic, neuroprotective, antirheumatic, antiarthritic, year contrological and antiangiogenic activities. The cancer associated phosphatases and nucleic acids encoding the proteins are useful for cyisualiaing tumours in patients or diagnosing and treating cancer, e.g. compositions are useful for cyisualiaing tumours in patients or diagnosing and treating cancer, e.g. compositions and archive diseases, compareas, lung, ovarian, liver or colon cancer. The polypeptides and concernate autoimmune disease, diabetes mellitus, multiple sclerosis, concentrated arthritis, psoriasis, atherosclerosis, inflammation, scarring, condometriosis or angiogenesis, determining the effectiveness of drugs, concernation patient prognosis, or as targets for screening pharmaceutical agence represents the human cancer associated phosphatase.

The present amino acid sequence was used in the exemplification of the invention.

KPP agonists and antagonists are useful for CC diagnosing, treating or preventing disorders associated with aberrant CC expression of KPP, particularly cell proliferative disorders (e.g. CC arteriosclerosis, atherosclerosis, cirrhosis, hepatitis, paroxysmal CC nocturnal haemoglobinuria, polycythaemia vera, psoriasis, primary CC thromobocytopaemia or mental retardation), neurological disorders (e.g. Alzheimer's disease, Parkinson's disease or epilepsy), autoimmune/CC allegies, astema, autoimmune thyroiditis, contact dermatitis, Crohn's CC disease, disease, Hashimoto's thyroiditis, contact dermatitis, Crohn's CC disease, disease, Hashimoto's thyroiditis, irritable bowel syndrome, cc gout, Grave's disease, Hashimoto's thyroiditis, irritable bowel syndrome, multiple sclerosis, osteoarthritis, osteoporosis, pancreatitis, Reiter's syndrome, rheumatoid arthritis, Sogren's syndrome, uveities), or viral, bacterial, fungal, parasitic, protozoan or helminthic infections. The KPP is useful in assessing the effects of exogenous compounds on the CC useful in gene therapy and for creating transgenic animals to model human CC disease. The present sequence is human KPP protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       RESULT 13
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches

                                                                                                                                                                                                                                                                                                                                                                                                                The invention comprises the amino acid and coding sequences of novel proteins. The DNA and protein sequences of the invention are useful as: markers for tissues in which the corresponding protein is preferentially expressed; as molecular weight markers on gels; as chromosome markers or tags; to identify chromosomes or to map related gene positions; and to compare with endogenous DNA sequences in patients to identify potential genetic disorders. The present amino acid sequence represents a protein of the invention.

The invention relates to isolated polynucleotide (I) and polypeptide (II) csequences. (I) is useful as hybridisation probes, polymerase chain (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed cc genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is cuseful for generating antibodies against it, detecting or quantitating a cplypeptide in tissue, as molecular weight markers and as a food cc supplement. (II) and its binding partners are useful in medical imaging convolving aberrant protein expression or biological activity. The collypeptide and polynucleotide sequences have applications in collypeptide and polynucleotide sequences have applications in collypeptide and polynucleotide sequences have applications or responsible for genetic disorders or other traits to assess biodiversity cand to produce other types of data and products dependent on DNA and camino acid sequences ABG00010-ABG30377 represent novel human diagnostic patent did not appear in the printed specification, but was obtained in celectronic format directly from WIPO at fig. wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutation responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim

leucocyte common antigen-related protein (LAR) - rat (fragment)
N;Alternate names: LAR receptor-linked tyrosine phosphatase
N;Contains: protein-tyrosine-phosphatase (EC 3.1.3.48)
C.Species: Rattus norvegicus (Norway rat)
C;Date: 02-Unl-1996 #sequence_revision 02-Unl-1996 #text_change 21-Unn-2000
C;Accession: A56493; I55393
R;Znhang, U.S.; Longo, F.M.
J. Cell Biol. 128, 415-431, 1995
A;Title: LAR tyrosine phosphatase receptor: alternative splicing is preferen
A;Reference number: A56493; MUID:95146548; PMID:7844155
A;Accession: A56493; MUID:95146548; PMID:7844155
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      R;Longo, F.M.; Martignetti, J.A.; Le Beau, J.M.; Zhang, J.S.; Barnes, J.P.; Brot J. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
